1. GENERAL

1.1 Latar Belakang

Struktur Tanjung Miring Barat (TMB) terletak di Kabupaten Muara Enim dan Kota Prabumulih, sekitar 20 kilometer di sebelah tenggara Kota Prabumulih, dengan luas daerah sekitar 8 km². Struktur Karangan (KRG) terletak di Kabupaten Muara Enim dan Kota Prabumulih, sekitar 15 kilometer di sebelah selatan Kota Prabumulih, dengan luas daerah sekitar 45 km².

ID	Easting (Meter)	Northing (Meter)	Elevation (Meter)	Feature Code

PM-8593	425000,093	907528,777	19,046	

Gambar 1. Lokasi Rencana SP Tanjung Miring Barat - Karangan Timur

Lapangan Tanjung Miring Barat telah diproduksi sejak tahun 1938 dan terus beroperasi hingga tahun 2003 dengan produksi terakhir dari sumur TMB-11. Sejak dinonaktifkannya lapangan ini, fasilitas produksi yang terdiri dari flowline, stasiun pengumpul, serta jalur pengiriman pipa minyak ke custody transfer (PPP Prabumulih) sudah tidak layak operasi. Apabila akan dilakukan pengembangan lapangan, diperlukan pembangunan fasilitas produksi baru yang dapat menampung produksi hidrokarbon dari lapangan Tanjung Miring Baral serta memprosesnya agar sesuai dengan spesifikasi yang dipersyaratkan di titik serah. Saat ini status SP TMB adalah idle atau tidak beroperasi, sehingga produksi sumuran menggunakan Tank On-Site (TOS) dan dikirim secara gross ke SP-II TMT menggunakan trucking. Dikarenakan tidak adanya line gas ke sumur-sumur struktur TMB, supply Listrik untuk pumping unit menggunakan solar (diesel engine). Lapangan Karangan Timur hanya diproduksikan dari 2 sumur yaitu KRG-9 dan KRG-10 beroperasi mulai tahun 1984, dimana kondisi eksisting jalur pengiriman minyak dari sumur menggunakan trucking. Apabila akan dilakukan

pengembangan lapangan, diperlukan pembangunan fasilitas produksi baru yang dapat menampung produksi hidrokarbon dari lapangan Tanjung Miring Barat serta memprosesnya agar sesuai dengan spesifikasi yang dipersyaratkan di titik serah.

Dalam rencana jangka panjang sebagai upaya peningkatan produksi, PT Pertamina EP berencana akan mengembangkan Lapangan Tanjung Miring Barat dan Karangan Timur melalui pengembangan fasilitas produksi dimana rencana kerja pengembangan fasilitas akan dibagi ke dalam dua fase.

Pada fase pertama, produksi dari pengembangan awal TMB -KRG Timur akan dikirimkan menuju fasilitas sewa Early Production Facility (EPF) untuk selanjutnya dikirimkan menuju SP-1 TLJ melalui trunkline baru. Pada fase ini lingkup fasilitas produksi yang akan dibangun adalah flow/ine dari sumuran, sewa EPF dan trunkline dari EPF sampai dengan SP-1 TLJ.

Gambar 2. Rencana Pola Operasi Fase

Pada fase kedua, akan dilakukan pengembangan tambahan dari sumur-sumur TMB-KRG Timur. Pada fase ini, lingkup fasilitas produksi yang akan dibangun meliputi pembangunan flowline dari sumuran pengembangan lanjutan serta peningkatan fasilitas SP TMB untuk menggantikan sewa EPF.

Gambar 3. Rencana Pola Operasi Fase

1.2 Tujuan

Dokumen ini menjelaskan dipersiapkan sebagai Mechanical Datasheet for Fuel Gas Package (Z-002) sebagai bagian dari desain yang harus diikuti oieh KONTRAKTOR dan VENDOR untuk proyek Pembangunan Fasilitas Stasiun Pengumpul Lapangan Tanjung Miring Barat- Karangan Timur, Field Prabumulih.

1.3 Ruang Lingkup

Mechanical Datasheet ini meliputi ketentuan minimal dalam mengatur desain. material,pabrikasi, pemeriksaan, pengujian, persiapan, pengecatan dan persiapan untuk pengiriman Fuel Gas Package (Z-002) untuk dipasang di proyek Pembangunan Fasilitas Stasiun Pengumpul Lapangan Tanjung Miring Barat — Karangan Timur, Field Prabumulih.

1.4 Istilah

Dokumen ini berisi istilah-istilah yang memiliki definisi tercantum sebagai berikut:

Perusahaan	Perusahaan yang dimaksud adalah PT PERTAMINA HULU ROKAN selaku Pemilik dan Pengguna Fasilitas akhir.
Kontraktor	Pihak yang dipilih oleh PERUSAHAAN sebagai pelaksana pekerjaan pengadaan dan konstruksi yang akan bertanggung jawab kepada PERUSAHAAN.
Vendor	Pihak lain yang akan menyediakan sesuatu untuk kebutuhan proyek, selain yang disediakan oleh PERUSAHAAN dan KONTRAKTOR, disebut VENDOR. Tanggung jawabnya langsung kepada KONTRAKTOR baik terhadap PO maupun bentuk perjanjian lain antara VENDOR dan

	KONTRAKTOR.
SKK MIGAS	Suatu badan dari Pemerintah Indonesia yang bertanggung jawab terhadap proses persetujuan dan izin untuk semua fasilitas di lingkungan minyak dan gas.
Perencana	Pihak yang dipilih oleh PERUSAHAAN sebagai pelaksana pekerjaan Jasa FEED Engineering Services. Dalam hal ini disebut PERENCANA, yang akan bertanggung jawab kepada PERUSAHAAN sebagaimana dirinci dalam kontrak, scope of work, atau work order.
Inspektor	Perwakilan dari PERUSAHAAN dan/atau seseorang yang ditunjuk oleh PERUSAHAAN, yang bertanggung jawab sebagai INSPEKTOR atas pekerjaan yang dilakukan oleh KONTRAKTOR.SINGKATAN

2. KODE, STANDAR, DAN REFERENSI

DOKUMEN PROYEK

1. TMBP-SP001-ME-DBS-D101 — Mechanical Design Basis
2. TMBP-SP001-PR-PID-D116 — PID DIESEL FUEL SYSTEM

1	**PACKAGE SCOPE OF SUPPLY**
2	- The fuel gas skid is expected to handle the separation of liquid carry over and heating of fuel gas before entering of fuel gas distribution.
3	- The package shall be supplied with all items required to START, OPERATE, and SHUTDOWN safely.
4	- The supply shall include the following major equipment as minimum:
5	a. 1 x 100% Fuel Gas Scrubber
6	b. 2 x 100% Fuel Gas Filter
7	c. On skid instrument and Monitoring Device
8	d. On skid Electrical & Instrument Wiring, Cables, Cable Tray and Junction Box (Skid Junction Box for Controls and Safety System shall be separated
9	f. Structural skid with drip pan & drain nozzle
10	g. Platforms, ladders, and Hand Railing, as required
11	h. Marked Escape Route
12	i. Thermal Insulation (IF ANY)
13	j. On Skid Shutdown / Safety Devices / Instrumentation separated control and monitoring
14	k. Junction Box connected to unit control panel located in MCC Room
15	l. Unit Control Panel ON/OFF/AUTO/MANUAL switch and Instrumentation Device

14	**NOTES (CONTINUED)**
15	1. Vendor to Furnish data merked " VENDOR to advise, ". " * ", or "VTA"
16	2. VENDOR shall be responsible for detailed engineering of the package
17	3. All Vessel Instrumentation nozzle (such as level gauge, temperature indicator, pressure indicator, etc.)
18	4. LCV Outlet and PSV Outlet shall equipped on the Vessel
19	5. VENDOR shall verify this datasheet based on latest PID prior Purchasing Order.
20	6. VENDOR shall submit the thickness calculation for each shell, bottom, and top plate and the other calculation as required.
21	7. VENDOR to advise on recommended vessel dimension and internals
22	8. VENDOR shall provide overall weight information within skid battery limit
23	9. VENDOR to furnish nozzle sizes, location & orientation
24	10. Scrubber shall be sized for removal 99.99% of all liquid droplets of size 10 micron and larger.
25	11. Gasket shall be 0.175" thick flexitalic style CGI, Spiral Wound, Teflon Filled, 316SS Windings, per ASME B16.20. SS 316 Inner & Outer Ring
26	12. Wind speed 64.44 mph, Seismic Design Code ZONE 2A, Soil Type as per soil investigation
27	13. Vessel shall be completed with manhole or handhole as required complete with Hinge and Davits.
28	14. The fuel gas skid Vendor shall confirm the fuel gas rate and temperature required to Fuel Gas Distribution
29	15. All pipe work within skid shall be so arranged that all maintainable items are easily accessible and capable of being removed.
30	16. All Owner's interface piping shall be terminated at skid edge with flange ends
31	17. Access platforms and ladders shall be provided for all instrumentation /control/ valves which require monitoring / maintenance.
32	18. As a minimum vessel shall be sized for liquid residence time of 5 minutes at normal operation.
33	19. All internal shall be bolted to supports welded to the vessel.
34	20. 20% margin has been considered for inlet flowrate
35	21. Vendor to provide separation efficiency calculation for the demisting device
36	22. Vendor to provide pressure drop calculation for the demisting device.
37	23. The fuel gas skid vendor shall confirm the fuel gas rate and temperature required to the fuel gas distribution
38	24. All metallic material shall be procvided with inspection certificate in accordance with BS/EN 10204, 2004 edition, pressure parts with type 3.1 certification, and non pressure parts with type 2.2 certification.
39	25. Ultrasonic examination shall be concluded for laminar defects and inclusions in accordance ASTM A578, level A for shell, head and lifting plate material.
40	26. VENDOR to calculate hydraulic calculation within package
41	27. VENDOR design shall consider gas composition and properties to be used as fuel gas
42	28. Fuel gas package shall have provision to accommodate possible variation of raw gas resultin in low heating value variation of 10%.
43	29. All repair welded joint shall have provision to accommodate possible variation of raw gas resultin in low heating value variation of 10%
44	30. All electrical, instruments, coontrol shall be suitable for specified area classification where installed
45	31. All electrical, instruments, coontrol shall be suitable for specified area classification where installed
46	32. All fields instrumentaion & control panel, junction box should be in accordance with general specification for instrument and general specification for control panel
47	33. Control panel shall be placed on skid included with package equipment
48	34. All field electrical & instrument cable should be armour type. Armoured: Galvanize steel wired braid armoured type.
49	35. Vendor shall be responsible for shop acceptance test and site acceptance test. Final acceptance will be after successful start up / commissioning unit
50	36. Vendor specialized for commissioning shall assist company during pre-commissioning.
51	37. Spare parts list for 2 years operation shall be clearly defined by Vendor and shall also be included in the quotation but will be purchased separately, complete with part number and quantity.
52	38. All external bolts, nuts, and washers shall be fluorocarbon coated
53	39. VENDOR to submit all VDRL Documents including Datasheet, GA Drawing, Calculation, and all centrification required.
