# 1. GENERAL

## 1.1 Latar Belakang

Struktur Tanjung Miring Barat (TMB) terletak di Kabupaten Muara Enim dan Kota Prabumulih, sekitar 20 kilometer di sebelah tenggara Kota Prabumulih, dengan luas daerah sekitar 8 km². Struktur Karangan (KRG) terletak di Kabupaten Muara Enim dan Kota Prabumulih, sekitar 15 kilometer di sebelah selatan Kota Prabumulih, dengan luas daerah sekitar 45 km².

| ID | Easting (Meter) | Northing (Meter) | Elevation (Meter) | Feature Code |
|---|---|---|---|---|
| PN-1531 | 424962,745 | 967376,210 | 10,414 | |
| PM-8593 | 425000,093 | 907528,777 | 19,046 | |

**Gambar 1. Lokasi Rencana SP Tanjung Miring Barat - Karangan Timur**

Lapangan Tanjung Miring Barat telah diproduksi sejak tahun 1938 dan terus beroperasi hingga tahun 2003 dengan produksi terakhir dari sumur TMB-11. Sejak dinonaktifkannya lapangan ini, fasilitas produksi yang terdiri dari flowline, stasiun pengumpul, serta jalur pengiriman pipa minyak ke custody transfer (PPP Prabumulih) sudah tidak layak operasi. Apabila akan dilakukan pengembangan lapangan, diperlukan pembangunan fasilitas produksi baru yang dapat menampung produksi hidrokarbon dari lapangan Tanjung Miring Baral serta memprosesnya agar sesuai dengan spesifikasi yang dipersyaratkan di titik serah. Saat ini status SP TMB adalah idle atau tidak beroperasi, sehingga produksi sumuran menggunakan Tank On-Site (TOS) dan dikirim secara gross ke SP-II TMT menggunakan trucking. Dikarenakan tidak adanya line gas ke sumur-sumur struktur TMB, supply Listrik untuk pumping unit menggunakan solar (diesel engine). Lapangan Karangan Timur hanya diproduksikan dari 2 sumur yaitu KRG-9 dan KRG-10 beroperasi mulai tahun 1984, dimana kondisi eksisting jalur pengiriman minyak dari sumur menggunakan trucking. Apabila akan dilakukan pengembangan lapangan, diperlukan pembangunan fasilitas produksi baru yang dapat

menampung produksi hidrokarbon dari lapangan Tanjung Miring Barat serta memprosesnya agar sesuai dengan spesifikasi yang dipersyaratkan di titik serah.

Dalam rencana jangka panjang sebagai upaya peningkatan produksi, PT Pertamina EP berencana akan mengembangkan Lapangan Tanjung Miring Barat dan Karangan Timur melalui pengembangan fasilitas produksi dimana rencana kerja pengembangan fasilitas akan dibagi ke dalam dua fase.

Pada fase pertama, produksi dari pengembangan awal TMB -KRG Timur akan dikirimkan menuju fasilitas sewa Early Production Facility (EPF) untuk selanjutnya dikirimkan menuju SP-1 TLJ melalui trunkline baru. Pada fase ini lingkup fasilitas produksi yang akan dibangun adalah flow/ine dari sumuran, sewa EPF dan trunkline dari EPF sampai dengan SP-1 TLJ.

**Gambar 2. Rencana Pola Operasi Fase**

Pada fase kedua, akan dilakukan pengembangan tambahan dari sumur-sumur TMB-KRG Timur. Pada fase ini, lingkup fasilitas produksi yang akan dibangun meliputi pembangunan flowline dari sumuran pengembangan lanjutan serta peningkatan fasilitas SP TMB untuk menggantikan sewa EPF.

**Gambar 3. Rencana Pola Operasi Fase**

## 1.2 Tujuan

Dokumen ini menjelaskan dipersiapkan sebagai Mechanical Datasheet Test Pump KRG (P-003 A/B) sebagai bagian dari desain yang harus diikuti oieh KONTRAKTOR dan VENDOR untuk proyek Pembangunan Fasilitas Stasiun Pengumpul Lapangan Tanjung Miring Barat- Karangan Timur, Field Prabumulih.

## 1.3 Ruang Lingkup

Mechanical Datasheet ini meliputi ketentuan minimal dalam mengatur desain. material,pabrikasi, pemeriksaan, pengujian, persiapan, pengecatan dan persiapan untuk pengiriman Test Pump KRG (P-003 A/B) untuk dipasang di proyek Pembangunan Fasilitas Stasiun Pengumpul Lapangan Tanjung Miring Barat — Karangan Timur, Field Prabumulih.

## 1.4 Istilah

Dokumen ini berisi istilah-istilah yang memiliki definisi tercantum sebagai berikut:

| | |
|---|---|
| Perusahaan | Perusahaan yang dimaksud adalah PT PERTAMINA HULU ROKAN selaku Pemilik dan Pengguna Fasilitas akhir. |
| Kontraktor | Pihak yang dipilih oleh PERUSAHAAN sebagai pelaksana pekerjaan pengadaan dan konstruksi yang akan bertanggung jawab kepada PERUSAHAAN. |
| Vendor | Pihak lain yang akan menyediakan sesuatu untuk kebutuhan proyek, selain yang disediakan oleh PERUSAHAAN dan KONTRAKTOR, disebut VENDOR. Tanggung jawabnya langsung kepada KONTRAKTOR baik terhadap PO maupun bentuk perjanjian lain antara VENDOR dan KONTRAKTOR. |

| | |
|---|---|
| SKK MIGAS | Suatu badan dari Pemerintah Indonesia yang bertanggung jawab terhadap proses persetujuan dan izin untuk semua fasilitas di lingkungan minyak dan gas. |
| Perencana | Pihak yang dipilih oleh PERUSAHAAN sebagai pelaksana pekerjaan Jasa FEED Engineering Services. Dalam hal ini disebut PERENCANA, yang akan bertanggung jawab kepada PERUSAHAAN sebagaimana dirinci dalam kontrak, scope of work, atau work order. |
| Inspektor | Perwakilan dari PERUSAHAAN dan/atau seseorang yang ditunjuk oleh PERUSAHAAN, yang bertanggung jawab sebagai INSPEKTOR atas pekerjaan yang dilakukan oleh KONTRAKTOR.SINGKATAN |

## NOTES

(*) = VTA (VENDOR to advise and shall fill detail value or data before Purchase Order)

1 Margin NPSH shall be minimum 1 meter (3 ft) otherwise Witness NPSH Test is required.

2 Material certificates shall be provided for 3.1 for wetted parts & pressure parts and 2.2 for others as per ISO 10474 Standard.

3 The Pump shall be designed as per below requirements:
- TMBP-SP001-ME-DBS-D101 — Mechanical Design Basis
- TMBP-02-PR-CAL-303 — Process Calculation Test Pump KRG (P-003 A/B)
-TMBP-SP001-PR-DST-D107 —Process Datasheet – Test Pump P-002 & P-003 A/B
- TMBP-01-PR-PID-104 —Piping and Instrument diagram for Test Tank KRG (T-004) & Test Pump KRG (P-003 A/B)
- TMBP-SP001-ME-SPE-D103 — Specification – API Centrifugal Pump
- API 610 Latest Edition — Centrifugal Pumps for Petroleum, Petrochemical and Natural Gas Industries
- API 682 — Pumps – Shaft Sealing Systems for Centrifugal and Rotary Pumps

4 Motor shall be designed as per below requirements:
- Motor shall be as per IEC Standard & shall be sized for End of Curve (EOC) operation
- TMBP-SP001-EL-SPE-D106 — Specification for Induction Motor

5 Finish/top color shall comply as per Document Painting & Coating TMBP-SP001-PI-SPE-D109 “Piping Painting & Lettering Specification”.

6 Drain & Vent connection shall be provided with isolation valve and blind flange.

7 Mechanical seal shall be designed as per below requirement:
- Mechanical seal shall be compatible with process liquid
- VENDOR shall check, design and guarantee that material of mechanical seal is suitable as per process liquid
- VENDOR shall provide mechanical seal selection from seal manufacturer before Purchase Order (P.O)

8 VENDOR shall check and guarantee that material of the pump is suitable as per process liquid before Purchase Order (P.O).

9 Complete Unit Test of the pump shall include with job motor & job mechanical seal.

10 Pump should be completed with oil level glass.

11 Pump actual capacity shall be ±10% from design capacity.

12 Pump operation shall be 2×100%, 1 (one) running and 1 (one) standby.

13 VENDOR shall recalculate actual power rating before Purchase Order (PO).

14 Temperature of oil at bearing chamber shall not exceed 140 °F and max 180 °F will shut down the pump.

15 VENDOR shall include below requirement:
- Factory Acceptance Test (FAT) execution
- Motor solo run, site realignment, SAT including commissioning supervision
- Certificate material 3.1 and 3.2 for critical part shaft and impeller
- First Filling: Lube oil/Grease
- Mating Flange, Counter Flange (if required)
- Insulation for bolt connection at flange suction and discharge
